Success story

Systematic management of energy efficiency has become a success key factor for enterprises of all sizes, by enhancing long and medium term sustainability. The Power2SME project [1] aims the creation of a Cloud system that will change the SMEs way to use energy by presenting an overview of how they use their resources.

For supporting the SMEs in energy management and substantiating the decisions to implement consumer efficiency measures, the Power2SME (Cloud Platform for Smart Energy Use in SMEs) project provides a Cloud management platform with functionalities for:

- Measuring energy consumption and associated costs;
- Analyzing consumer trends;
- Assessing the economic efficiency of ESCO / EPC projects;
- Forming recommendations based on economic data and consumption;
- Creating energy reports compliant with international standards (ISO 50001);
- Creating mutually beneficial relationships between customers, equipment suppliers/energy and services suppliers;

Participants: BEIA (Romania) [1], EXPERIS (Spain) [2], CCCOM (Austria) [3].
